100% HAY REPLACEMENT

Quality

If you are an owner of prized livestock, you have probably faced the difficult challenge of finding quality forage on a consistent basis. It is not always easy to keep the digestive system of livestock properly functioning, while also meeting a large percentage of your animals' daily nutrient requirements at a reasonable cost. Chaffhaye provides a solution as a superior alternative to baled hay and processed feeds.

Chaffhaye is crafted from premium-quality alfalfa. While still fresh, the crop is chopped, lightly misted with molasses, and compressed into an airtight bag. A fermentation initiates in the bag, transforming the forage into a 'super soluble' forage. In the bag, yeast, enzymes and beneficial bacteria unlock nutrition from the plant fiber and convert its nutrition into a form that is usable and more readily absorbable by your animal. This "pre-digestion" process closely mimics the digestive activity in the intestinal tract of healthy ruminants and browsers. Since Chaffhaye is dust-free and virtually mold free, it alleviates the most common digestive and respiratory ailments generally associated with the feeding of dry hays and pellets.

As a premier source of quality fiber, Chaffhaye is the safest and most convenient way to maximize health and performance of livestock. When used as 100% hay replacement, your animal will demonstrate a marked improvement in digestion, immunity, growth and performance. Minimally processed, Chaffhaye is the closest product you can buy to natural pasture.

Chaffhaye is the ONLY hay we use as dry hay doesn't even compare to the quality of this product! The added benefit of no waste just makes it that much more economical as well. Chaffhaye has been the best dry hay substitute for our animals. They have healthier coats, better milk production, recover quicker after kidding and just love eating their daily ration

Virginia

“ At the fair, Texas A&M University performed a sonogram on all steers entered into the fair to measure rib eye and Jimmy Jr.'s steer placed first. In my opinion, Chaffhaye was a major component in this goal. I have started feeding Chaffhaye to my horses and am very pleased with the overall growth I have seen in them.

Bedias, Texas ”

Guarantee

We are fully dedicated to crafting all-natural forage. We manage every aspect of our cultivation, harvest and packaging to achieve exceptional forage quality. Guaranteed. For more information, visit our web site at www.Chaffhaye.com

100% HAY REPLACEMENT

Benefits

Top Quality – Chaffhaye is premium alfalfa harvested at optimal plant maturity to maximize nutrients. Chaffhaye is a supreme source of fiber, protein, and nutrients for browsers and grazers.

Superior Digestibility – Chaffhaye is a natural source of beneficial yeast, enzymes, and microorganisms that support healthy digestion and absorption of nutrients. Chaffhaye helps reestablish healthy microflora in the gut of animals after stress and medications and reduces digestive ailments. Chaffhaye is easily masticated and digested – perfect for senior animals.

Versatile – Chaffhaye Alfalfa is easily mixed with other quality forages, allowing you to craft a custom ration of desired nutrition for your animal.

Dust Free – Chaffhaye retains natural plant moisture and is 100% dust free, making it ideal for animals with coughing and respiratory ailments.

Superior Palatability – Soft and leafy like pasture, Chaffhaye provides a pleasant aroma and is coarsely chopped to release enzymes and maintain good gut motility. A kiss of molasses ensures that every last bit is licked clean – even by the most finicky eater!

Easy Transport – Sturdy 50-pound bags are convenient for travel and shows.

Less Waste – Animals eat all of Chaffhaye, including stems. This means less waste and cleaner stalls. Because of the high nutrient absorption of Chaffhaye, up to 50% less manure and waste is generated, reducing cleanup time.

Cost Effective – Chaffhaye is much more nutritious than hay, so the amount of supplements and hard feeds can be greatly reduced. A long shelf life with no loss of nutrition ensures no wasted feed.

Certified Weed Seed Free – Chaffhaye is ideal for habitats where foreign seeds are controlled or prohibited by law.

Blister Beetle Free – Chaffhaye is safe for all forage eating animals.

Nutrition

Guaranteed Nutrition – Chaffhaye is tested by independent laboratories to verify nutritional forage quality. **Guaranteed.**

Nutritional Analysis (On a Dry Matter Basis)	Chaffhaye Alfalfa
Crude Protein	19%–23%
Crude Fat	4.0%–4.8%
Crude Fiber	23%–29%
Total Digestible Nutrients (TDN)	65%–68%
Relative Feed Value (RFV)	145–180
Calcium (Ca)	1.2%–1.6%
Phosphorus (P)	0.2%
Copper (Cu), ppm	6–8
Zinc, ppm	18–22
Natural Plant Juices (as fed)	50%–55%

Chaffhaye Alfalfa provides the animal owner with exceptional versatility in crafting a ration that closely meets the desired nutritional requirement of each animal. If achieving optimal milk and meat production or maximizing reproduction successes is the aim of the feeding program, the ration should be mostly Chaffhaye Alfalfa, a nutrient rich forage product. If animal maintenance is the aim, the ration can be a mixture of Chaffhaye Alfalfa and a quality grass forage or pasture.

“

A few years ago we acquired a small herd of nannies that were close to death. Since we started feeding Chaffhaye, our tiny herd has really grown. This last season we had 13 sets of twins, 6 sets of triplets, 1 set of quadruplets and 1 set of quintuplets. That's right, FIVE!

Feeding

Ingredients:

Alfalfa with a kiss of cane molasses to aid the fermentation process.

Feeding Instructions

Chaffhaye is a 100% hay replacement

Weight of Animal (lbs)	50	100	200	500	1000
Daily Chaffhaye Amount (lbs)	1.2	2.5	5.0	12.5	25.0

Chaffhaye is designed to meet the forage portion of your animal's diet. Depending on such factors as age, breed, workload and available pasture, a vitamin and/or mineral supplement may be needed. Consult a Chaffhaye representative or your animal nutritionist for further information.

After observing your animal for a period of time on Chaffhaye, you may want to increase or decrease by up to 10% to obtain the desired overall body condition and appearance.

Feed changes should be made gradually over a period of 7 to 14 days. Changes in the rate of feeding should not exceed 2 pounds per day.
