

Chaffhaye

Pasture-in-a-Bag

DEER

ALL CLASSES

100% HAY REPLACEMENT

# Quality

If you are an owner of a prized deer herd, you have probably faced the difficult challenge of finding consistent quality forage. It is not always easy to keep the digestive system of deer properly functioning, while also meeting a large percentage of your animals daily nutrient requirements at a reasonable cost. Chaffhaye provides the best solution to your feeding problems. Chaffhaye is the superior alternative to feeding baled hay and processed feeds.

Chaffhaye is crafted from premium-quality alfalfa forage. While still fresh, the crop is chopped, lightly misted with molasses, and compressed into an airtight bag. A fermentation initiates in the bag, transforming the hay into a "super soluble" forage. In the bag, yeast, enzymes and beneficial bacteria unlock nutrition from the plant fiber and convert it into a form that is usable and more readily absorbable by your deer. This "pre-digestion" process closely mimics the digestive activity in the intestinal tract of healthy browsers. Since Chaffhaye is dust-free and mold free, it alleviates the most common digestive and respiratory ailments generally associated with the feeding of dry hays and pellets.

As a premier source of quality fiber, Chaffhaye is the safest and most convenient way to maximize health and performance of deer. When used as 100% hay replacement, your deer will demonstrate a marked improvement in digestion, immunity and growth.

Being a fresh chopped source of quality fiber, Chaffhaye is the closest feed you can buy to natural pasture. That's why we call it "Pasture-in-a-Bag."

*My Father owns a Texas Century Ranch of 900 acres. We started feeding a mixture of corn and Chaffhaye to our deer about a year and half ago. We've actually seen deer pass up straight corn to go to Chaffhaye. It's amazing. We believe that having Chaffhaye out all year, especially during the Spring and Summer - antler growing months, has more than paid off.*

# Nutrition

**Guaranteed Nutrition** – Chaffhaye is tested by independent laboratories to verify nutritional forage quality. *Guaranteed.*

<b>Nutritional Analysis (On a Dry Matter Basis)</b>	<b>Chaffhaye Alfalfa</b>
Crude Protein	19%–23%
Crude Fat	3.8%– 4.1%
Crude Fiber	23%–29%
Total Digestible Nutrients (TDN)	65%–68%
Relative Feed Value (RFV)	145–180
Calcium (Ca)	1.6%–2.0%
Phosphorus (P)	0.2%
Copper (Cu), ppm	8–9
Zinc, ppm	18–22
Natural Plant Juices (as fed)	50%–55%

There are three primary factors effecting antler growth - age, genetics and nutrition. Of those, the most important one and the one you have the most immediate control over is nutrition. It takes lots of high quality nutrition for a deer to maximize its genetic potential for antler growth.

So if optimal animal health and maximum antler production are your goals, then Chaffhaye is your answer. By starting with superior quality alfalfa and enhancing digestibility through a natural fermentation process, your deer herd will have a better feed.

# Feeding

Weight of Animal (lbs)	50	100	200	300
Daily Chaffhaye Amount (lbs)	1.2	2.5	5.0	7.5

Chaffhaye is designed to meet the forage portion of your deer's diet. Depending on such factors as age, breed, available pasture, an energy and/or vitamin and mineral supplement may be needed. Consult your animal nutritionist for further information.

After observing your deer for a period of time on Chaffhaye, you may want to increase or decrease by up to 10% to obtain the desired overall body condition and appearance.

*“ Since we started using Chaffhaye over a year ago, we have seen 100% consumption and our deer look healthier than ever. In addition, our 1 & 2 year old bucks are the best we have ever grown. Here is a picture of a 2 year old buck we grew on Chaffhaye.*
